Financial Consideration

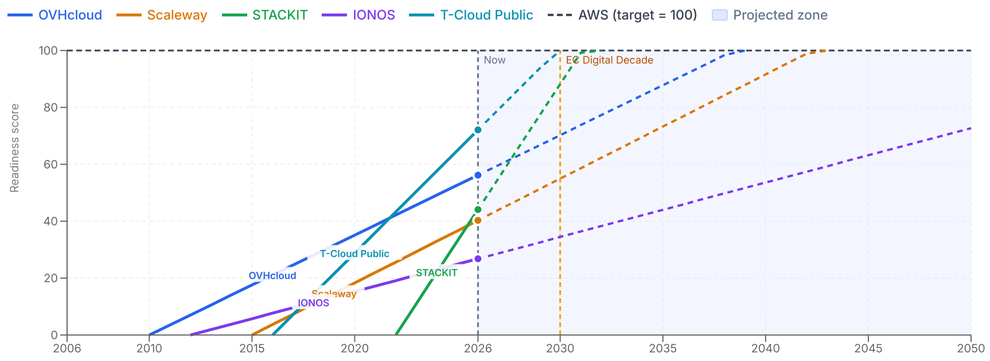

EU Cloud Provider Readiness Gap — Historical Growth & Projected Parity with AWS

READINESS GAP

Readiness Gap Closure — EU Providers vs AWS (2006 – 2050)

velocity (pts/yr) = score ÷ (2026 − launch year) ·
parity ≈ 2026 + (100 − score) ÷ velocity

OVHCLOUD	SCALEWAY	STACKIT	IONOS	T-CLOUD PUBLIC
56.2	40.3	44.1	26.8	72.1
3.5 pts/yr · ~2039	3.7 pts/yr · ~2043	11.0 pts/yr · ~2032	1.9 pts/yr · ~2065	7.2 pts/yr · ~2030

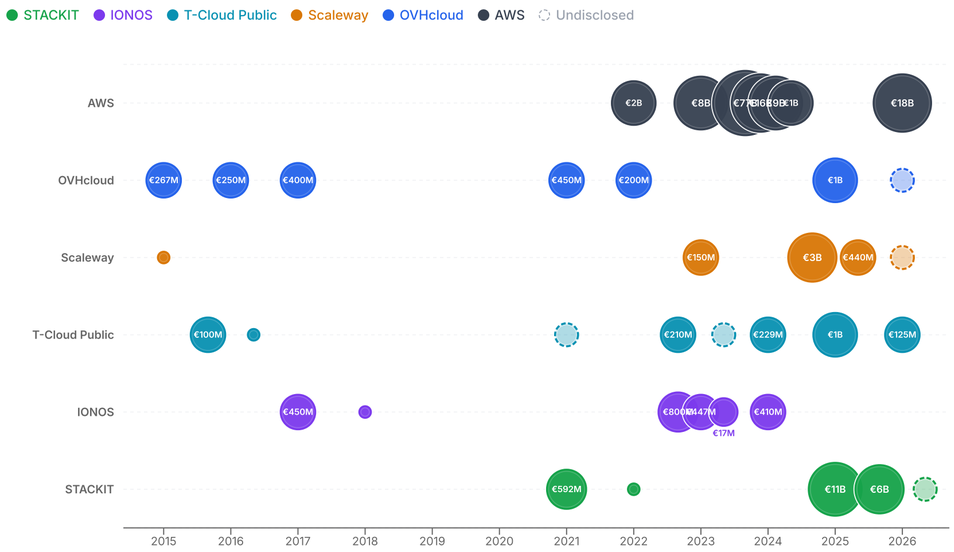

CONSIDERING THE LAUNCH DATE

Each line starts at zero at the provider's cloud launch year and climbs toward AWS at 100. The shaded zone is projection — each provider continues at the same annual rate observed historically. **T-Cloud Public** and **STACKIT** are on track to close the gap around 2030. The other three converge between 2040 and 2048.

INVESTMENT

Investment & Funding Milestones — EU Providers & AWS (2015 – 2026)

Bubble size proportional to capital committed. Dashed outline = amount undisclosed. Hover any bubble for the full story.

READING THE TIMELINE

Each bubble marks a capital event — IPO, parent commitment, government grant, or annual capex. AWS operates at a scale no EU provider approaches: its FY2024 group capex (~€76B) exceeds the total cumulative investment of all five EU providers combined. STACKIT's €11B Lübbenau data centre commitment is the single largest EU sovereign cloud infrastructure pledge to date, yet still represents less than one quarter of AWS's annual capex.

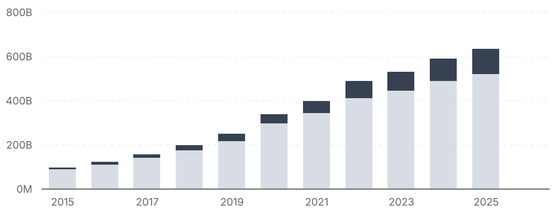

REVENUE

Global Revenue — Parent Group and Cloud Arm, 2015–2026

Each bar is a parent group's total revenue, with its cloud arm shown inside it. A dashed line in a hatched bar is the closest figure that provider does publish — a larger business the cloud arm sits within, so it caps how big the arm could be rather than stating it. Panels have their own scales; Amazon and OVHcloud differ by three orders of magnitude. EUR millions, Amazon converted at the ECB annual average rate (0.901 in 2015, 0.885 in 2025).

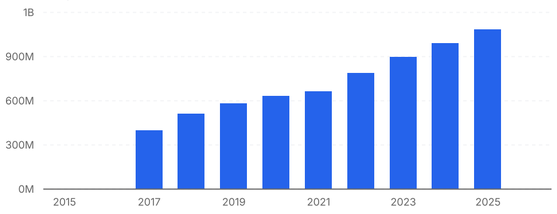

Parent group, excluding the cloud arm · Cloud arm (published) · Cloud arm undisclosed — split cannot be drawn · No bar = no published group figure for that year

AWS
Amazon.com, Inc.

2026 not yet reported.

OVHcloud
OVH Groupe S.A.

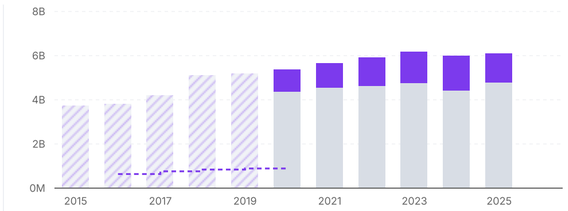

No group figure found: 2015, 2016. 2026 not yet reported.

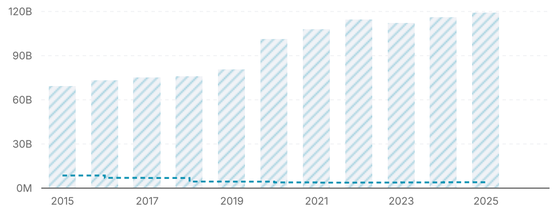

IONOS
United Internet AG

T-Cloud Public
Deutsche Telekom AG

Cloud arm as a share of its group
The six groups span a factor of 608 in size, so a euro axis cannot hold them. A share can.

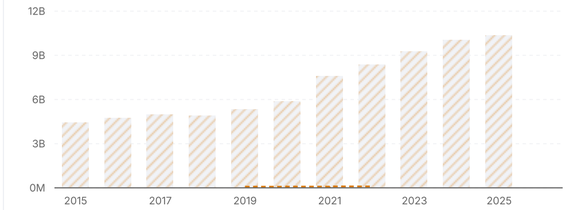

--- Business Applications — a differently drawn business, so it neither caps nor props up the cloud arm. *2026 not yet reported.*

--- T-Systems segment — the cloud arm is part of this, so it is smaller. *Cloud arm revenue never published. 2026 not yet reported.*

Scaleway

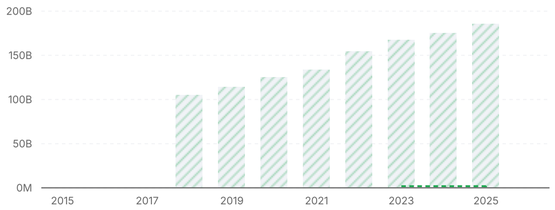

iliad S.A. (iliad Group)

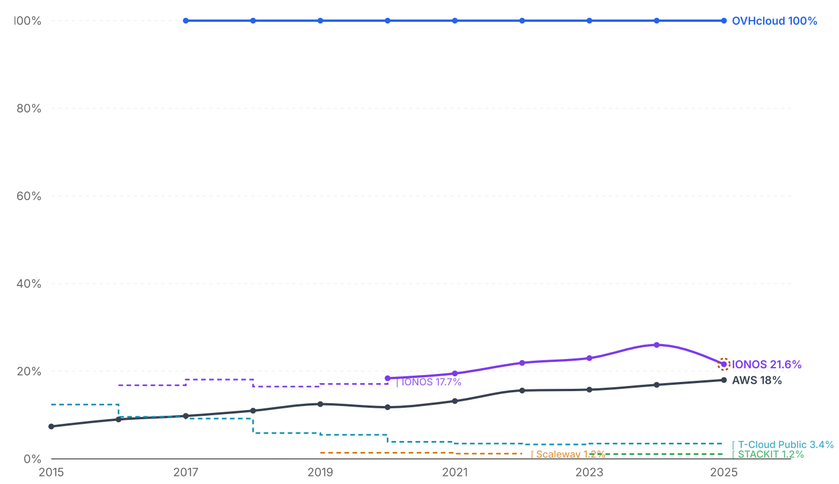

--- Scaleway S.A.S. — this is only one part of the cloud arm, so the whole is bigger. *Cloud arm revenue never published. 2026 not yet reported.*

STACKIT

Schwarz Group (Unternehmen der Schwarz Gruppe)

--- Schwarz Digits — the cloud arm is part of this, so it is smaller. *Cloud arm revenue never published. No group figure found: 2015, 2016, 2017. 2026 not yet reported.*

Scaleway	no line — cloud arm revenue never published
STACKIT	no line — cloud arm revenue never published
T-Cloud Public	no line — cloud arm revenue never published
○ 2025	IONOS step is the AdTech reclassification under IFRS 5, not a real change

PROVIDER	PARENT GROUP	CLOUD ARM	OUTGROWING ITS OWNER?	AWS CLOUD ARM IS
AWS	20.7%/yr 2015–2025	32%/yr 2015–2025	yes, by 11.3 pts	—
OVHcloud	13.3%/yr 2017–2025	13.3%/yr 2017–2025	same company	105× bigger 2025
IONOS	5.1%/yr 2015–2025	5.9%/yr 2020–2025	yes, by 0.8 pts	86.5× bigger 2025
T-Cloud Public	5.6%/yr 2015–2025	1%/yr T-Systems segment, 2020–2025	cannot be said	at least 28× bigger 2025 · the real gap can only be wider, never narrower
Scaleway	8.9%/yr 2015–2025	10.4%/yr Scaleway S.A.S., 2019–2022	cannot be said	no more than 739× bigger 2022 · the real gap can only be narrower, never wider
STACKIT	8.4%/yr 2018–2025	7.6%/yr Schwarz Digits, 2023–2025	cannot be said	at least 52× bigger 2025 · the real gap can only be wider, never narrower

Growth is compound annual, over each figure's own available years, which differ. Where a provider does not publish its cloud revenue, the nearest figure it does publish is used instead and shown in grey. That substitute is sometimes a larger business the cloud arm sits inside, in which case the real gap to AWS can only be wider than shown; and sometimes only one national company out of several, in which case the real gap can only be narrower. Each row says which.

READING THE PANELS

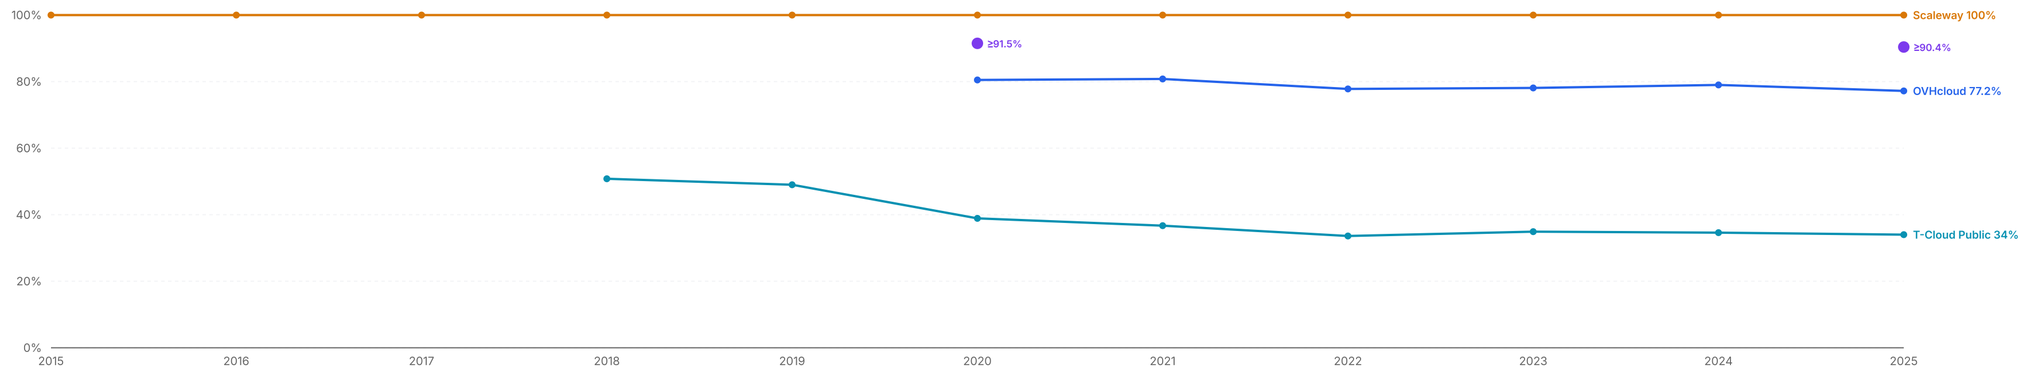

Only one of the six splits for the whole window. Amazon reports AWS as a segment in its 10-K, so the cloud arm is visible every year, growing from 7.4% of group revenue in 2015 to 18.0% in 2025. IONOS splits from 2020, when it first reported separately after being carved out of United Internet's Business Applications segment. OVHcloud is one solid bar: parent and cloud business are the same company.

The three hatched panels are the finding, not a gap in the research. Deutsche Telekom has never published Open Telekom Cloud revenue, iliad never Scaleway's, the Schwarz Group never STACKIT's. In each, the cloud business sits inside a group dominated by something else — telecommunications twice, grocery retail once — and is small enough that the group need not report it separately.

The nearest businesses they do report are themselves small: Systems Solutions at 3.4% of Deutsche Telekom in 2025, down from 12.4% in 2015, and Schwarz Digits at 1.2% of group turnover. Each contains the cloud arm, so the arm is smaller again. Scaleway runs the other way — its published accounts cover the French company alone, leaving out the Italian and US ones, so the whole is larger than shown.

Share of Revenue Earned in Europe, 2015–2025

The **parent group's** European share, not the cloud arm's — geography is disclosed at group level only. For OVHcloud the two coincide, the group being the cloud business. The question is not how big these providers are but how European: whether a sovereign cloud offer sits inside a European business or a global one.

PROVIDER	PARENT GROUP	WHAT THE PARENT PUBLISHES	LATEST
AWS	Amazon.com, Inc.	no geographic breakdown of any kind nothing to plot	—
OVHcloud	OVH Groupe S.A.	a region table, every year 2020–2025	**77.2%** 2025
IONOS	United Internet AG	only domestic against foreign, so this is a minimum 2020–2025	**at least 90.4%** 2025
T-Cloud Public	Deutsche Telekom AG	a region table, every year 2018–2025	**34%** 2025
Scaleway	iliad S.A. (iliad Group)	revenue country by country; all of them European 2015–2025	**100%** 2025 · France, Italy, Poland
STACKIT	Schwarz Group (Unternehmen der Schwarz Gruppe)	no geographic breakdown of any kind nothing to plot	—

WHY AWS IS NOT ON THIS CHART

Amazon reports AWS as one worldwide segment with no geographic split; its revenue-by-country note covers retail. A regional entity does file accounts — Amazon Web Services EMEA SARL, Luxembourg, RCS B186284, since 2016 — but its territory is EMEA, taking in Bahrain, Israel, Kuwait, Saudi Arabia and the UAE, and it is an intra-group reseller, so its turnover is a transfer-pricing figure rather than customer revenue. Against OVHcloud's European revenue that would compare two different maps and two different kinds of number.

WHAT THE FOUR SHOW

They do not cluster. iliad earns every euro in France, Italy and Poland, so Scaleway sits inside a wholly European business. OVHcloud earns just over three quarters in Europe, drifting down as its American and Asian regions grew. United Internet takes about nine tenths in Germany alone — though no exact share is available, as it reports only domestic against foreign, and its foreign revenue mixes European countries with IONOS Inc. in Philadelphia.

Deutsche Telekom is the outlier, and the movement is the point: Europe was 50.8% of its revenue in 2018 and 34.0% in 2025, as T-Mobile US grew into two thirds of the group. Open Telekom Cloud is a European sovereign cloud offer owned by a group now earning most of its money in the United States. The Schwarz Group publishes no geographic breakdown, so STACKIT cannot be placed on this axis.

THESIS QUESTIONS

THESIS QUESTION — *Do EU providers extract meaningful sovereign readiness from each euro invested — or does scale ultimately decide?*
(for every €1 invested, how is that closing the gap from AWS?)

Money Committed and the Gap to AWS

● money already put in ◌ with money announced but not yet built ↑ room to rise once it is spent

READING THIS CHART

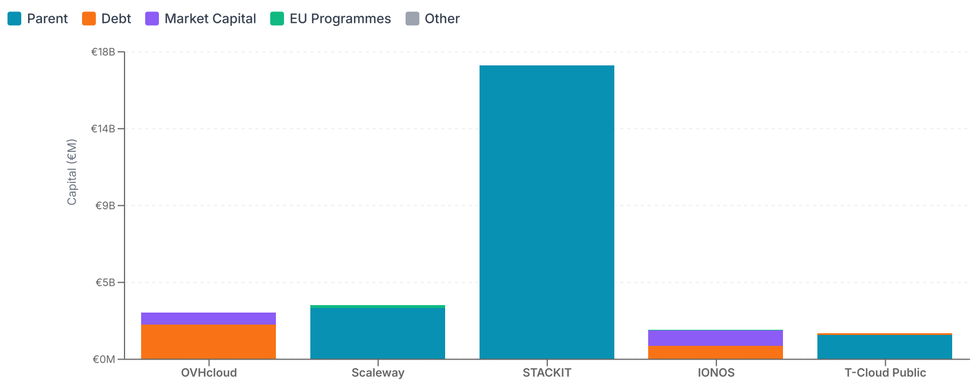

Money is not part of the readiness score, so the two axes are measured separately and neither is calculated from the other. The chart puts them side by side rather than deriving one from the other: a dot's position across shows what a provider has committed, its height shows how far it has got.

Three providers have announced money they have not yet built — **STACKIT** (€16.6B across Lübbenau and Dummerstorf), **Scaleway** (iliad's €3B) and **AWS** (€42.7B across the European Sovereign Cloud, Spain and Milan). Their hollow dot sits further right and carries an arrow: that money is a chance to climb, once it is spent. How far it climbs is not something this data can say. The other three — **T-Cloud Public**, **OVHcloud** and **IONOS** — have announced nothing new, so they have one dot and stay where they are.

THESIS QUESTION — *How does capital structure — market-funded independence vs parent-subsidised scale — shape each provider's path to sovereignty?*
(where the money to build each provider's cloud came from?)

Where Each Provider's Capital Came From

Stacked by source of the money. Contracts won, assets sold and announcements without a figure are excluded. Each source's share is in the tooltip.

CAPITAL INDEPENDENCE AS A SOVEREIGNTY SIGNAL

The five split cleanly in two. **OVHcloud** and **IONOS** raised effectively all of their capital on the open market — bonds, bank facilities, a stock-market listing, private investors — so their growth had to satisfy someone outside the company. **STACKIT**, **Scaleway** and **T-Cloud Public** are funded by a parent: Schwarz, iliad and Deutsche Telekom respectively. Only a syndicated loan for the Biere site keeps T-Cloud Public from being wholly parent-funded.

Neither route is the sovereign one. Market funding has to be repaid or was sold in exchange for part of the company, which puts the owner beyond the provider's control; parent funding can be withdrawn by a single decision no customer can see coming. **EU Programmes** are barely visible at either provider that received them, which places the question of who ultimately controls these businesses outside public hands.

HOW THESE CHARTS ARE COMPUTED ▸
