ASSESSMENT METHODOLOGY & SERVICES REFERENCE

HOW IT WORKS

AWS is used as the 100% capability baseline across 13 dimensions. Each EU provider is scored per dimension based on whether a managed equivalent service exists. The gap between a provider line and the AWS ceiling is the readiness gap — the larger the gap, the more migration friction an enterprise would face.

COVERAGE SCORING (PER SERVICE)

Y Full — a managed equivalent exists with comparable functionality and GA status

60 AWS SERVICES · 11 FEATURE DIMENSIONS

show all

Web and App Hosting 1 · Compute 6 · Storage 5 · Database 7 · Networking 7 · AI/ML 6 · Security 12 · Monitoring 4 · Dev/Deploy 5 · IoT 2 · Messaging 5

P Partial — service exists but is in beta, feature-limited, or requires a workaround

N None — no managed equivalent; self-hosting on IaaS required

DIMENSION SCORING

Each feature dimension score = (Y×2 + P×1) / (services×2) × 100. Scalability & Performance are pre-assessed 0–100 scores based on published regions, auto-scaling capabilities, and SLA documentation.

⭐ = Required by Alps Alpine (Ja in checklist) — 50 services · 🌐 = Industry Top-50 standard, not currently identified as needed — 10 services · Source: aws.amazon.com/products · Full mapping in `REFERENCES.md`
